CASH-FLOW REPORT

Credicorp Flex report: utility cost spikes

By CM Beyer Commercial Research Desk - Commercial research editor - Updated 11 July 2026

A report for companies using a facility to smooth a cost spike while prices or usage are reviewed.

A utility spike can land before prices can be passed through or usage can be reduced. Treat the borrowing as a job to be done, not as extra revenue.

Credicorp Flex can bridge a temporary spike where the company has a plan to bring cost back under control. Compare the pounds repaid against the cost of waiting, delaying the supplier or missing the trade.

Finance does not fix margin. Review tariffs, usage and customer pricing at the same time. The citations make the route auditable without copying source text.

For Credicorp Flex, the discipline is to draw for short needs and repay when receipts land, not to treat the limit as extra revenue.
