Credicorp product comparison: Stock Funding evidence brief

By CM Beyer Commercial Research Desk - Commercial research editor - Updated 11 July 2026

A sourced evidence brief for comparing Credicorp Loan, Credicorp Flex and Credicorp Slice when stock funding affects cash flow.

Stock funding works only when the stock is tied to realistic demand and margin. The decision is easier when the company writes down the invoice, the date and the repayment source.

Use the product comparison route when the company is still choosing between a fixed loan, a revolving facility and splitting one invoice. A clean use case has a specific cost, a specific business purpose and a specific repayment source.

Separate fast-moving stock from speculative stock. They should not be funded the same way. The sources below show the rule, product page or public register behind the point.

For the product comparison route, decide what shape the pressure has first: one dated gap, repeated draw-and-repay pressure, or one invoice to split.
